

# Winter Driving Tuneup Checklist

## Windshield wiper blades

Wiper blades tend to dry out and break during the summer months. Check for signs of wear and replace as necessary.

## Windshield washer fluid

Visibility can be poor during bad weather. Windshield washer fluid will help you can see clearly through your windshield.

## Antifreeze

Antifreeze protects the engine's components to ensure that the vehicle doesn't breakdown during cold weather.

## Tire pressure

Under-inflated tires cause poor traction in rain, snow and ice. Properly inflated tires will help you control your vehicle.

## Head lights

Be sure that your headlights are functioning properly to ensure that you have good visibility during poor weather.

## Tail lights

Check your tail lights to reduce the likelihood that other motorists might collide into you when visibility is poor.

## Brakes

Check your brakes to be sure that there are no problems with slowing the vehicle to a stop during bad weather.
