

Telematics Evaluation Guide

for IT Managers

WennSoft

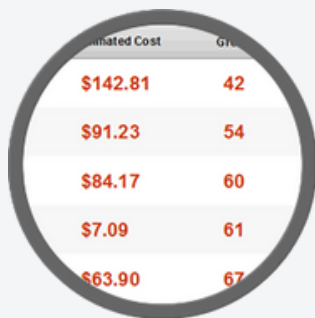

FieldLogix is one of the most comprehensive telematics solutions in the market. Over the **past 21 years**, we have continuously focused on enhancing our product and our clients' experiences with our award-winning services. We are a **US-based provider** and we are not here to make a quick buck by just "selling" you a technology. We want a long-term partnership where we are continuously providing you with value through our innovative and hassle-free solution. While we offer many more capabilities than those listed here, this guide focuses more on the capabilities that are most relevant to someone operating within the Information Technology function.

FUEL EFFICIENCY & SUSTAINABILITY

According to a study conducted by Motorola, the average fleet **wastes 13.2% of its fuel** due to excessive speeding and idling. Simple changes to your employees' behavior can reduce speeding and idling to eliminate these wasteful driving practices.

Fleet Sustainability Scorecard

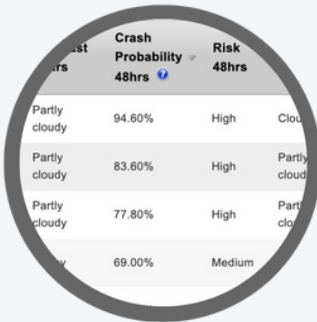

Sustainability
Scorecard

We will provide you with a fleet sustainability scorecard that identifies your most and least wasteful drivers. We will even show you the approximate fuel costs associated with these wasteful practices. We will also track MPG's for your vehicles to help you identify your least fuel efficient vehicles so you can reassign them to different service areas or replace them.

DRIVER SAFETY

Vehicles are rolling liabilities for fleet operators. In fact, according to Construction Equipment Magazine, the **average accident costs fleets \$16,500**, which increases to over **\$74,000** if an injury occurs, and further increases to **\$500,000** if there is a fatality.

A.I. Crash Risk Report & Safety Scorecard

Crash Probability 48hrs	Risk 48hrs
94.60%	High
83.60%	High
77.80%	High
69.00%	Medium

Crash Risk
Report

We will help you reduce accidents with our Crash Risk report that uses Artificial Intelligence to identify your high risk drivers. Our driver safety scorecard ranks and scores your drivers based on unsafe driving habits such as aggressive driving and speeding. We also offer dash cameras that will identify distracted driving activities such as cell phone use and eating or drinking. Fleets dramatically improve driver safety once they implement FieldLogix.

PRODUCTIVITY

	Arrival Time	Departure Time	Stop Time

Stop Details
Report

Motorola's study found that fleets **lose \$5,484 per employee each year** due to unproductive activities. This includes starting shifts late, taking extended lunch breaks, stopping at unauthorized locations, finishing shifts early, and overtime. We will help you identify unproductive technicians by showing you every location that they travel to and stop at during their shift. Our system will help you ensure that you are only paying your technicians for the time that they are actually working for you.

SYSTEM ADMINISTRATION

We offer one of the most extensive user rights capabilities in our industry. You have the ability to restrict user access to certain groups of vehicles and to specific features in our system. You even have the ability to assign your administrative users to specific timezones so they can view the data in their local time. Our Single Sign On capability gives you the ability to manage their login access through Microsoft Active Directory.

User Permissions

Notifications Profile

SELF SERVICE CAPABILITIES

Unlike many other systems in our industry, our system is designed to be completely self service. You can activate and re-label your own telematics devices, add and remove users, monitor potential device issues, and more without opening a support ticket. We also have live support personnel on hand via live chat, email, and phone to perform these actions for you if you prefer for us to do it.

A circular inset showing a screenshot of the 'Add Users' form. The form includes fields for Username (pre-filled with 'bob@robertac.com'), First Name, Last Name, and Email Address. It also has a Timezone Setting dropdown (set to 'Pacific Standard Time (Mexico), -07:00') and a Microsoft AD SSO checkbox (unchecked). Below these are Password and Confirm Password fields, and a green 'Continue to Permissions' button at the bottom right.

Add Users

RESOURCE GROUPS

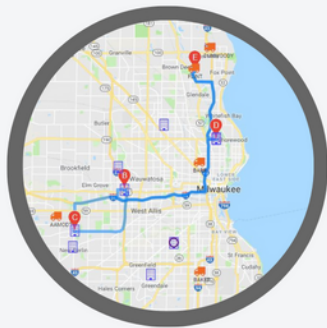

Manage Groups

Your various divisions can be setup in groups to help your users more easily segment your different operating groups within our system. Policy violation notification profiles can be setup by groups, saving you time when configuring your alerts. The users can also run reports that display activity by resource groups.

FREE WENNSOFT INTEGRATION

For over 10 years, we've offered a robust pre-built integration with Wennsoft. Our integration will display your technician's real-time locations on the Schedule map along with your job site locations, helping your dispatchers make quicker decisions. Our FREE integration requires no coding and can be setup within minutes.

Schedule Map

DATA SECURITY & PRIVACY

Unlike many other companies in our industry, we are a US-Based provider and your data is housed on our secure servers in the USA which use the latest Microsoft technologies. All data communications are encrypted and devices communications take place through a secured VPN. You will not have to worry about your data being stored and accessible to others in foreign countries that have limited data privacy and security laws.

TRUSTED PARTNER

We have been a trusted partner to Wennsoft's clients since 2012. Our industry-leading support processes ensure that you have a hassle-free experience that helps you focus on your company's needs and not on managing issues with your fleet management system.
