

Foundation Software API Accelerator Service

About the FieldLogix API Accelerator Service

FieldLogix provides a service that tracks the current and past locations of field technicians through a GPS tracking device installed in their vehicles or a smartphone app with wireless connectivity. The system provides an API that can communicate with 3rd party systems and share information such as customer site locations. The Foundation Software API Accelerator Service is designed to update FieldLogix with these records without requiring custom software development.

Access

The API Accelerator is a .exe program that is loaded on the server that hosts the Foundation database and it runs as a service.

Functionality

The FieldLogix Foundation Software API Accelerator is designed to insert your Sites from Foundation Software into FieldLogix as landmarks. The tool checks and updates the data in 60 minute intervals. It must be deployed as a Windows service on the server that hosts your Foundation Software database. It is compatible with Foundation software running .Net framework version 4 and above.

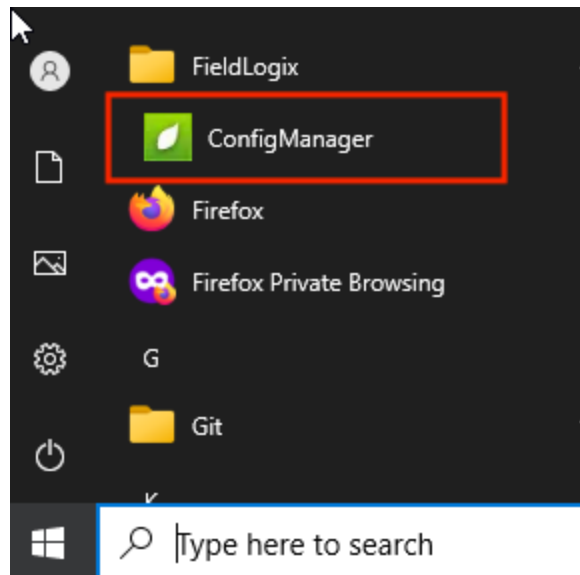

Behavior

When new sites are added to Foundation Software's **sd_sites** table, the tool will create corresponding landmarks in FieldLogix with a 0.05 radius.

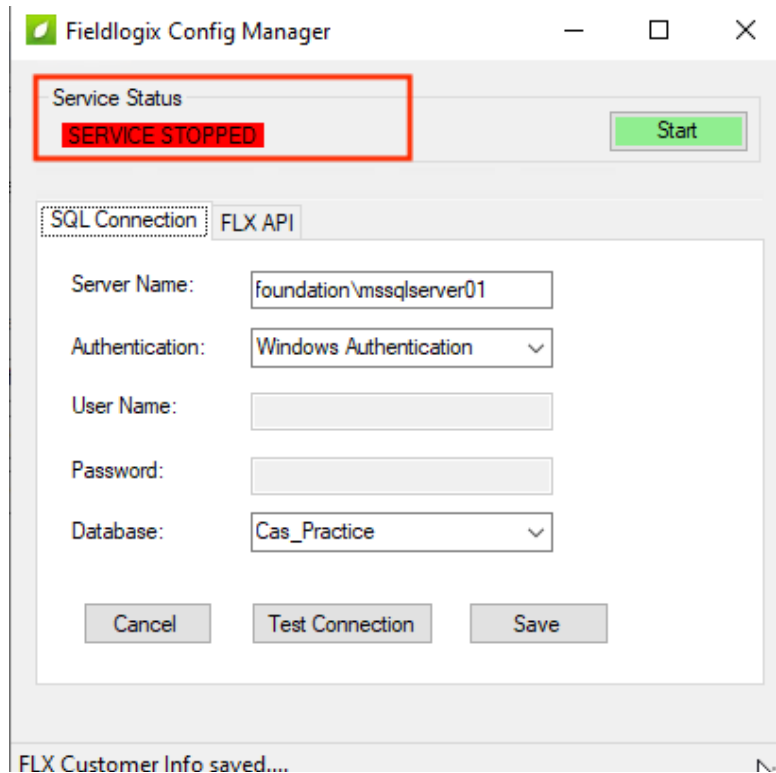

FieldLogix API tool Installation Instructions

Use of the FieldLogix Foundation Software API Tool service is bound by the Terms of Service as displayed in this document. If you do not consent to the Terms of Service, you must not install or run the FieldLogix API Tool.

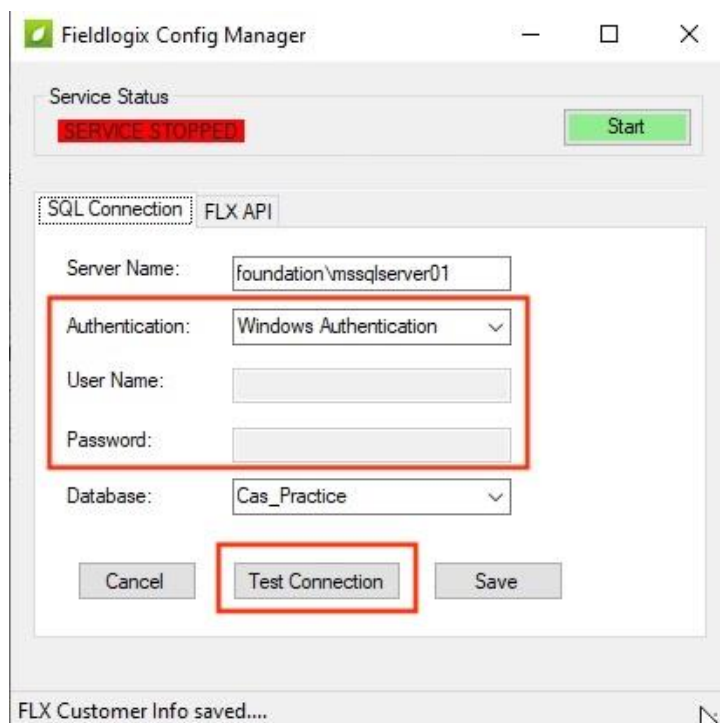

1. Create a new user in FieldLogix dedicated to your API account. You can name it “APImycompanyname”, etc. We recommend that you give it full fleet access in settings. (Add the user in: Settings > Manage Users > Add User)
2. Request a link to download the API Accelerator from support@fieldlogix.com. Save the folder containing the API Accelerator on your server .
3. Open the folder titled “Release” and click **Setup1.exe** to install the program and register the API tool in Windows.
4. Once the API_Tool has been installed, go to Installed Programs and look for FieldLogix > ConfigManager.

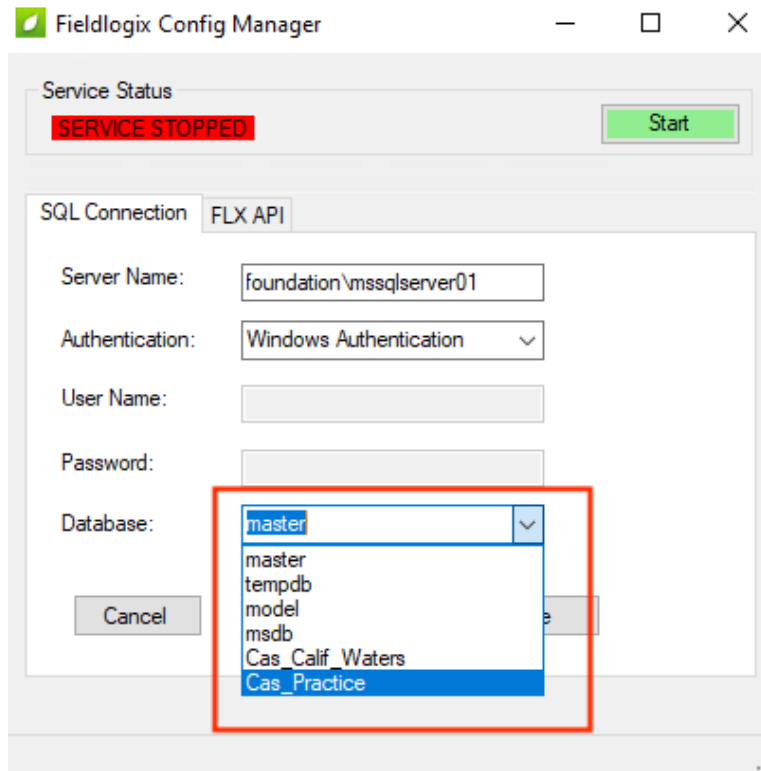

5. Open the ConfigManager and make sure that it states **SERVICE STOPPED**. If it is not, click the Stop button.

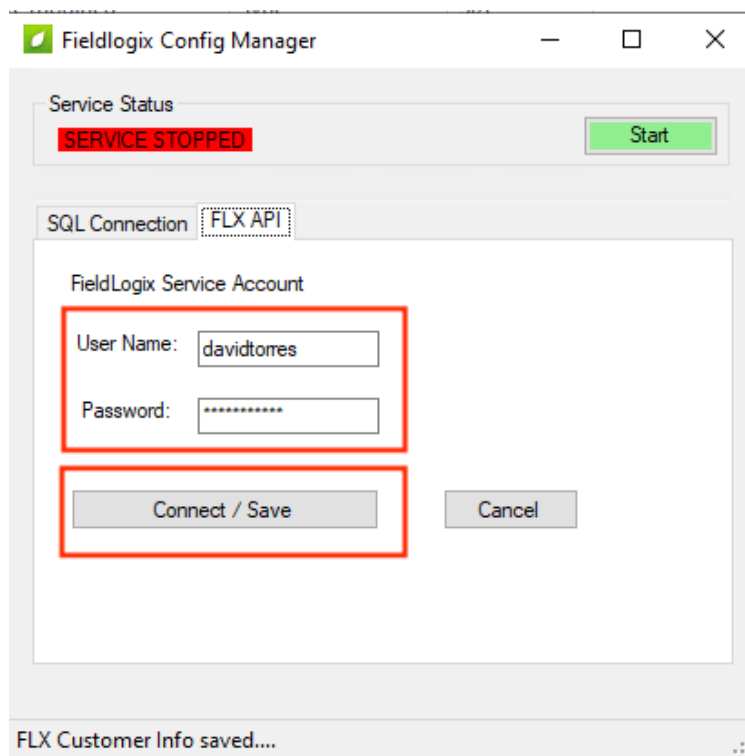

6. In the configManager interface, enter the SQL credentials. The Server Name field is the name of the server hosting the Foundation Software SQL database.
7. You can select Windows Authentication for domain access or SQL Authentication for remote username/password access. *Windows Authentication is typically used if the Foundation Database is on the same server as the API_Tool. SQL Authentication is typically used if the database and API_Tool are on different servers.* Once the credentials are saved, click the **Test Connection** button.

- If successful, the database dropdown will now display a list of databases to choose from for the API_tool to connect to. Select the Foundation Software database containing the **sd_sites** tables and click **Save**.

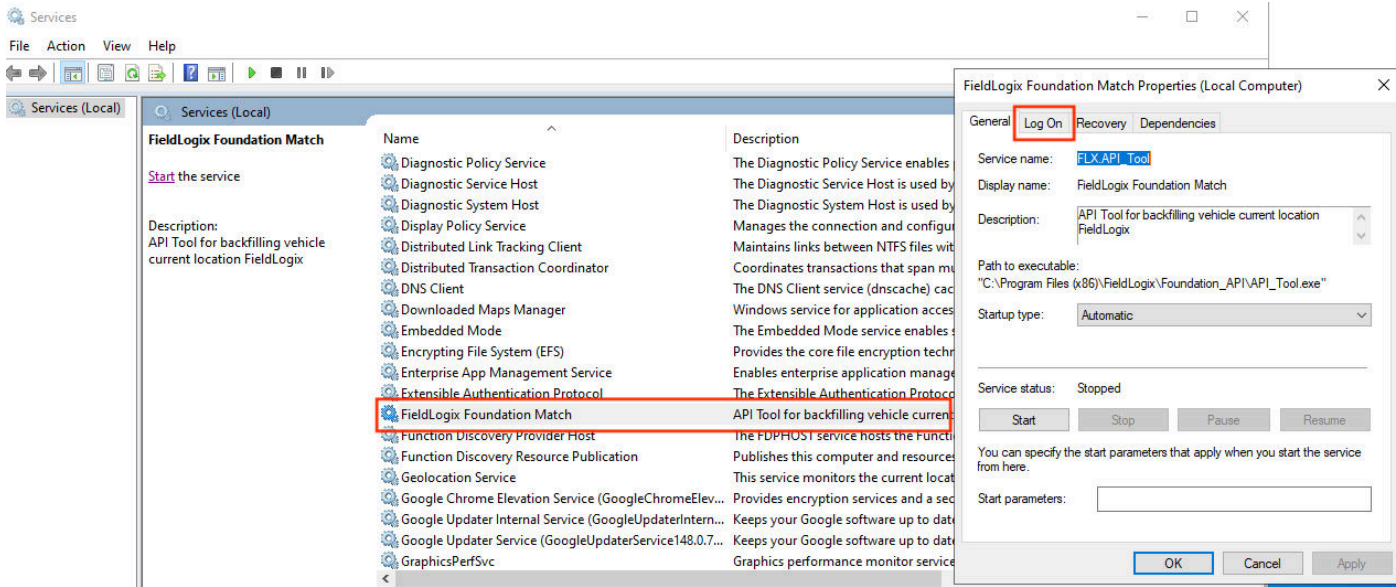

- Continue to the **FLX API** tab and enter the FieldLogix username and password for the user created in step 1 and click the **Connect/Save** button.

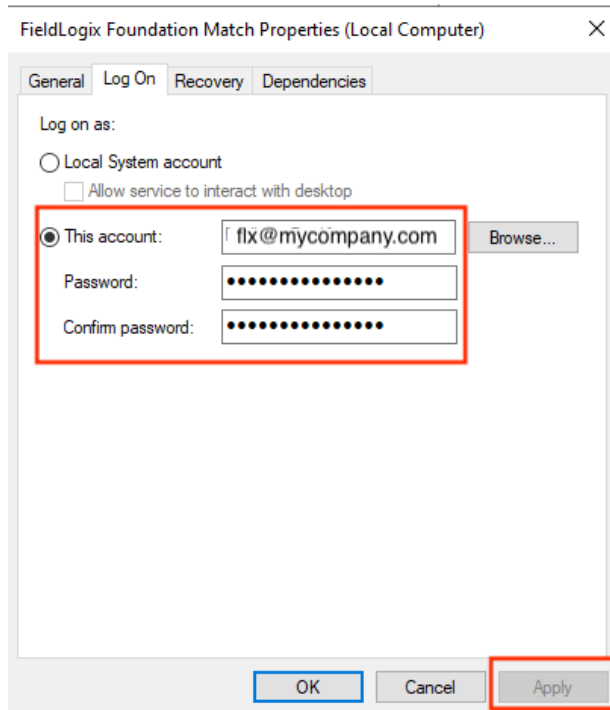

Service Domain Permissions

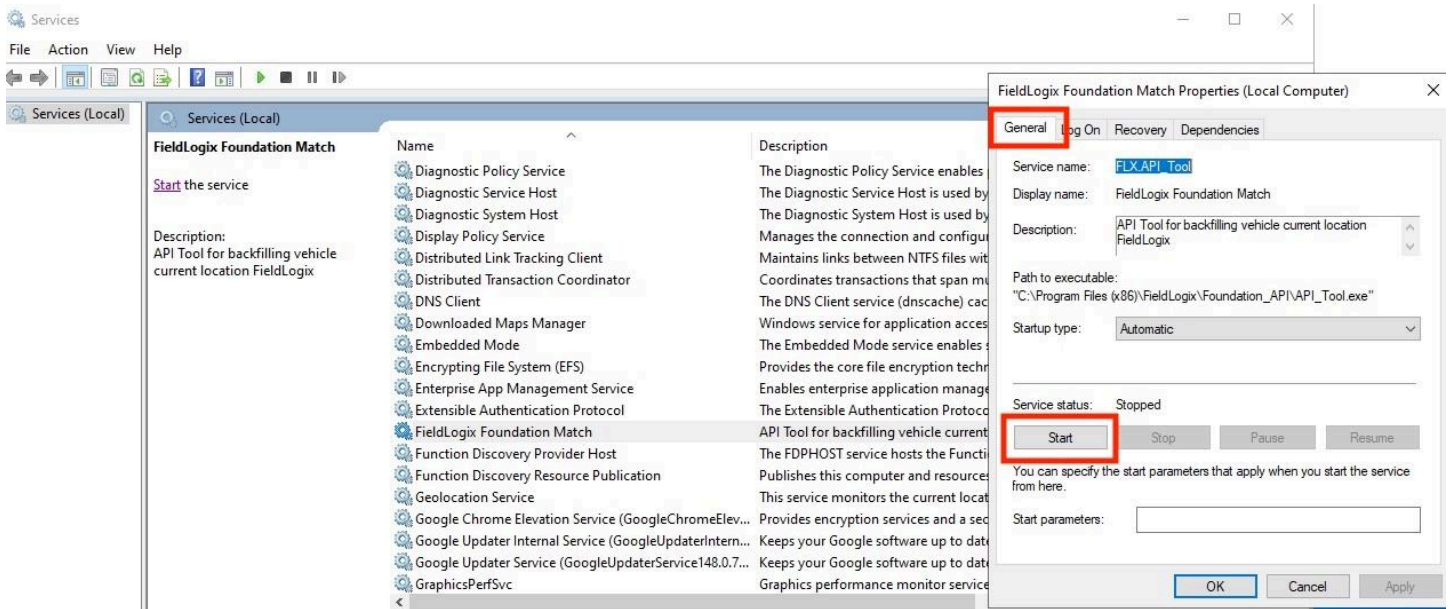

1. Open the services explorer and look for the FieldLogix Foundation Match service and double click on it to open Properties. Go to the **Log On** tab in the properties window.

2. Create a special user for the FieldLogix API Tool in Foundation Software that doesn't change its password. Please ensure that the user has permissions to **read** from the **sd_sites** table. This is required to enable the tool to read from the appropriate tables and is also a security recommendation.
3. Change the service to use the Foundation Software user account and click **Apply**.

4. Go back to the General tab and click **start**.

Log File

The log file is a very important part of the integration. It gives us the ability to troubleshoot any issues with the FieldLogix API Tool and Foundation Software connection. The log file should be stored in **C:\ProgramData\FieldLogix\API** and is named “**log.txt**”.

You must verify that this folder has read/write access within Properties.

Testing the Integration

Once the integration is successfully set up, check the **Manage Locations** page in FieldLogix (Settings > Manage Locations) to confirm that your sites are displayed as landmarks in FieldLogix.

We recommend that you check the table two business days after installing the tool to verify that the data is populating properly. You can also check the logs at **C:\ProgramData\FieldLogix\API\Log.txt** to verify that data is being updated.

To Uninstall the Tool

Go to the **Windows Control Panel > Programs and Features** and find the FieldLogix API Tool program. Click the program, then click the **Uninstall** button to remove it from your server.
